

Case_Study_5

Deploy application in gcp

Yogeshwaran.S

Step 1

User have to enable the app engine admin api service in gcp platform

Step -2

User have to download google cloud test python file repository using “gsutil -m cp -r gs://spls/gsp067/python-docs-samples .” commend then

Step- 3

User have to open the file dir using cd [file location] commend

Step – 4

There use can see the default main file and if user want user can rewire the default hello world program into something in case of checking code works or not.

Step – 5

Deploy the program using `dev_appserver.py app.yaml`

Step – 6

Deploy the program online via “`gcloud app deploy`” code then to see it online

Using “`gcloud app browse`”
